

Assignment

RESTful CRUD API

In this assignment you are tasked to build a single resource RESTful CRUD API. You may use any framework / technology stack you like.

Summary

You have to build a CRUD API for the resource **Course**. The resource should be publicly accessible, without any relationship.

Course database table should have:

- id
- title
- description
- status (Published,Pending)
- is_premium
- created_at
- deleted_at

You should provide database migrations for the schema.

Expected endpoints:

GET	/courses
GET	/courses/{id}
POST	/courses
PUT	/courses/{id}
DELETE	/courses/{id}

Any external input should be validated.

Course entity business logic code base should be reusable and open for extension.

Open API documentation will be appreciated.
